

Peltitarvike BIM objects for designers

ProdLib and MagiCAD Cloud guide

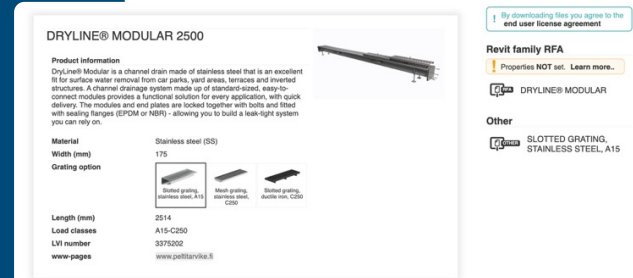

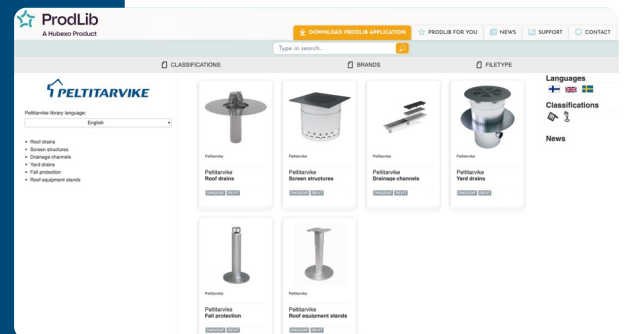

How to use Peltitarvike's ProdLib BIM object library

At the first navigate to www.prodlib.com. You have two ways to use BIM objects from ProdLib and following you can find instructions how to get started with both ways. ProdLib is free to use.

More detailed ProdLib user manual you can find [here](#). If you need more support with ProdLib please contact info@prodlib.com.

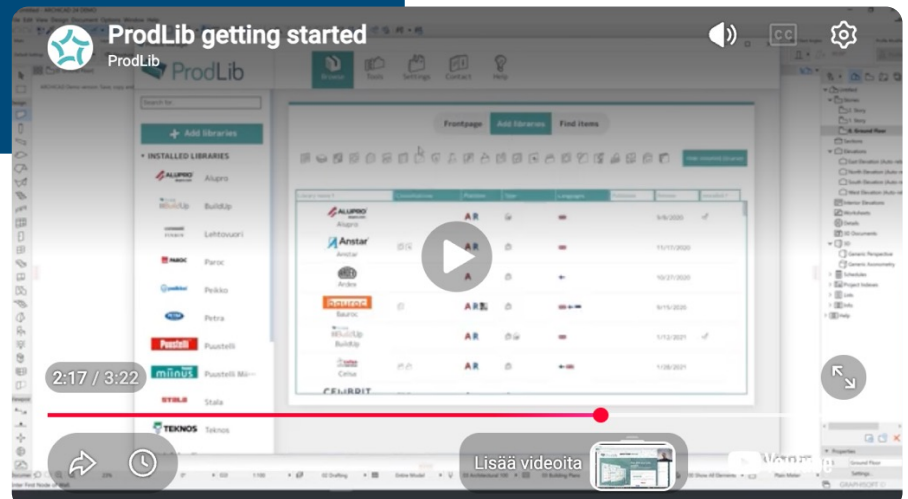

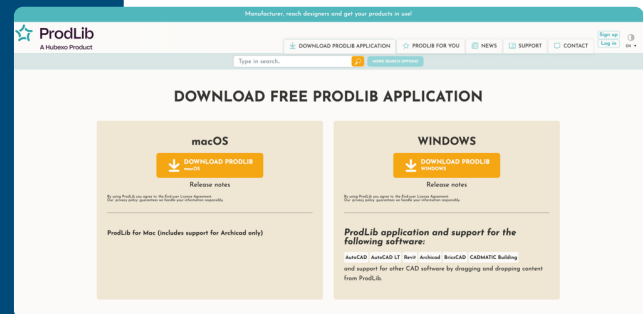

Download BIM objects directly from ProdLib web

1. Type Peltitarvike or product name to the search box on the website and click to the brand or product page. Direct link to the brand page [here](#).
2. On the brand page browse products by the categories and click to the wanted product.
3. When you have found the product you would like to add to your project, configure the product as needed (specify dimensions, accessories, etc.).
4. Download needed objects from the right panel. To download the BIM objects from the web you need to login in or sign up to ProdLib first (free).
5. Depending on the downloaded file type, add the objects to your project in AutoCAD, Revit or such as design software.

Install ProdLib application

1. Installing the application gives you access to the ProdLib database directly from your design software (AutoCad, Archicad, Brics CAD, CADMATIC Building and Revit). Direct link to the download page [here](#).
2. After installing the application open ProdLib in your design software.
3. Log in or sign up to ProdLib.
4. Search Peltitarvike brand page or products by name.
5. On the brand page browse products by the categories and click to the wanted product.
6. When you have found the product you would like to add to your project, configure the product as needed (specify dimensions, accessories, etc.) and download the object(s).
7. For more information about installing and using ProdLib application watch the video below.

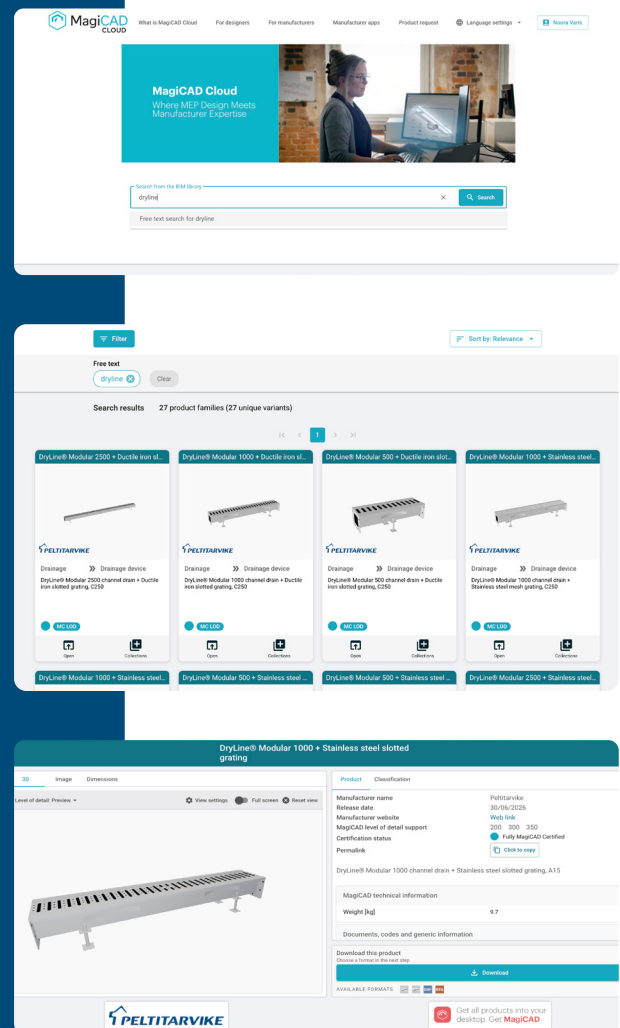

How to use Peltitarvike's MagiCAD Cloud BIM object library

You have two ways to use BIM objects from MagiCAD Cloud and following you can find instructions how to get started with both ways. In web, MagiCAD Cloud is free to use.
